Education

Graphic Era Hill University Dehradun,Uttarakhnad
Bachelor of Technology in Computer Science - 8.48gpa *Sep. 2023 – Jun 2027*

The Shivalik International School Uttarakhand
Class 12th(PCM) - 84.8% *2022–2023*

APS Nehru Road,Lucknow Uttarakhand
Class 10th - 89.7% *2020–2021*

Projects

Handwritten Character Recognition | *Python, pandas, numpy, Keras, CNN* Dec 2024 – Jan 2025

- Engineered a high-performance Handwritten Character Recognition system using Convolutional Neural Networks (CNN), achieving an impressive 97% accuracy.
- Optimized dataset preprocessing by applying advanced normalization and data augmentation techniques, resulting in enhanced model robustness and classification accuracy.
- Designed a deep CNN architecture with multiple convolutional, pooling, and fully connected layers, fine-tuned for high-precision recognition of handwritten characters.
- Leveraged TensorFlow and Keras libraries to build, train, and evaluate the model, incorporating hyperparameter tuning to maximize performance.

Youtube Comments Analysis | *Python, NLP* Mar 2024 – Apr 2024

- Developed an advanced YouTube Comment Analysis tool for sentiment analysis and keyword extraction using Python and Natural Language Processing (NLP) techniques.
- Integrated with the YouTube Data API to automatically retrieve and analyze comments, improving efficiency in processing large datasets.
- Implemented a comprehensive text preprocessing pipeline using NLTK, including stopword removal, tokenization, and lemmatization, to clean and structure data effectively.
- Built an intuitive Tkinter-based GUI application that allows users to input video URLs, retrieve comments, and analyze sentiment with ease.

Dog vs Cat Classification | *Python, CNN* Sep 2024 - Nov 2024

- Designed a model to detect Dog vs. Cat classification is a binary image classification problem where a model is trained to distinguish between images of dogs and cats.
- The provided Dog vs. Cat Classification code uses Convolutional Neural Networks (CNNs) with Supervised Learning for binary classification.
- Supervised Learning (Binary Classification) Convolutional Neural Networks (CNNs),ReLU Activation Function Max Pooling,Dropout (Regularization),Binary Crossentropy Loss
- The code evaluates the Dog vs. Cat classification model using accuracy metrics, Loss Function (Binary Crossentropy),Training and Validation Accuracy Plot

Technical Skills

Languages: Python, C, HTML/CSS
Developer Tools: Git, VS Code, Visual Studio, PyCharm
Libraries: pandas, NumPy, Matplotlib

Achievements

- **Big Data (NPTEL)**: Successfully completed in November 2023.
- **HTML/CSS**: Successfully completed in July 2023.
- **250+ LeetCode Problems**: Solved 250+ LeetCode problems and achieved rankings by surpassing 90.13% of users in easy questions, 90.72% in medium questions, and 92.58% in hard questions.
